

Review the following instructions for the installation of the Concealed Bracket (-C) mounting method used in our Slot Linear (DASL) products.

Instructions:

1. Through the slots of the diffuser (DASLXXX-C-X), open the blades to find the pre-drilled holes in the supports. Return Slot Linears (DASLRXXX-C-X) proceeded to the **Step 2**.
2. Feed the provided screws through pre-drilled holes. Thread the screw into bracket until connected. The screw should still be loose from support. Repeat this step for all brackets.
3. Carefully push the brackets into opening until ends of the bracket are clear of the contact point.
4. Adjust the diffuser into the desired position. Tighten each of the screws until the diffuser pulls securely against the ceiling.
